| 2.1 | Discover your ancestors..... | 5 |
| 2.2 | Modify the central individual..... | 6 |
| 2.3 | Print a document specially prepared for your research | 7 |

GeneoTree is intended to be intuitive for the user, requiring a minimum of learning. Only two features are described in this document. The rest are easy to find.

Administration is also minimal, since it involves integrating your gedcom files. However, two additional optional features are offered: integration of the mapping and the default preferences settings.

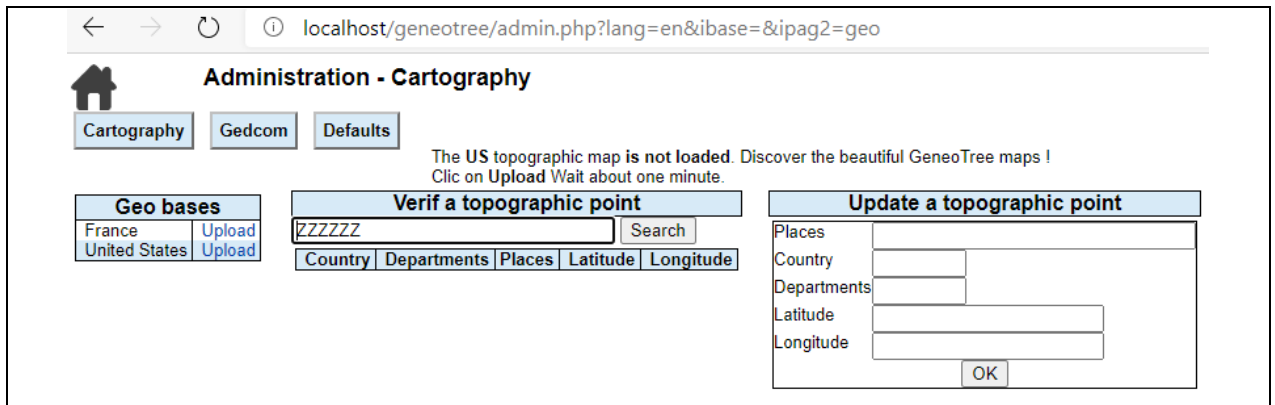

1 Administration

The first screen of GeneoTree is the following:

1. Click « Administration » button, on the top on the right.

If you are on a local server, the following screen appears:

If you are on a distant server, the following screen appears:

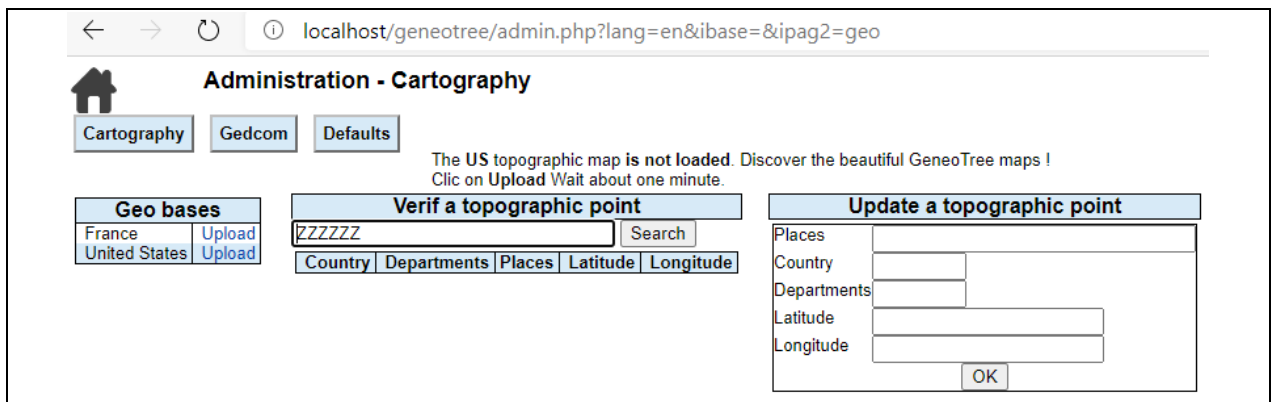

Enter the password you provided during the installation (see Administration user guide.pdf).

Note: The password is kept in memory (cookie) throughout the user session, and you can modify it in the config.php file.

1.1 Integrate cartography

1. Click on « Cartography » button. The following screen appears:

The 1st pane, on the left, allows you to load the base of topographic points. It is essential for the use of maps and Google Earth.

Note: The loading time is about one minute. This is done only once.

The second part, in the middle, allows you to check the existence of a point. It only works if at least one topographic base is loaded.

The 3rd part, on the right, allows you to enrich the base of points with nonexistent places. For example: old places, different spelling, ...

Note: The enrichment takes place in an independent database which makes it possible to store data from one version to another of GeneoTree.

1. Click to "Geo base" / "Upload" links
2. Click to "OK" button to validate

So, the following screen appears:

localhost/geneotree/admin.php?ipag2=geo&ipays&icomm=ZZZ&commu&pays&depar&latit&longi&valid_geo&lang=€

Administration - Cartography

Cartography Gedcom Defaults

| Geo bases | |
|---------------|----|
| France | OK |
| United States | OK |

| Verif a topographic point | | | | |
|---------------------------|-------------|--------|----------|-----------|
| ZZZ | Search | | | |
| Country | Departments | Places | Latitude | Longitude |

| Update a topographic point | |
|----------------------------|----------------------|
| Places | <input type="text"/> |
| Country | <input type="text"/> |
| Departments | <input type="text"/> |
| Latitude | <input type="text"/> |
| Longitude | <input type="text"/> |
| OK | |

1.2 Import Gedcom files

You will have to load your 1st gedcom file.

GeneoTree does not support blanks and special characters in the name of Gedcom files. In fact, the name of the file is identical to the name of the MySQL tables, which do not support blanks and special characters.

1. Click to "Gedcom" button. The follow screen appears:

localhost/geneotree/admin.php?lang=en&ibase=&ipag2=

Administration - Gedcom

Cartography Gedcom Defaults

Choisir un fichier Aucun fichier n'a été sélectionné

Upload

Deposit your gedcom files the follow directory : "C:\Geneotree\www\geneotree\gedcom" and your pictures in "C:\Geneotree\www\geneotree\picture" directories
Clic on the arrows to upload gedcom files

| Gedcom files disponibles | |
|--------------------------|--------|
| royal.ged | 490 Ko |
| uspresident.ged | 404 Ko |

Online databases →

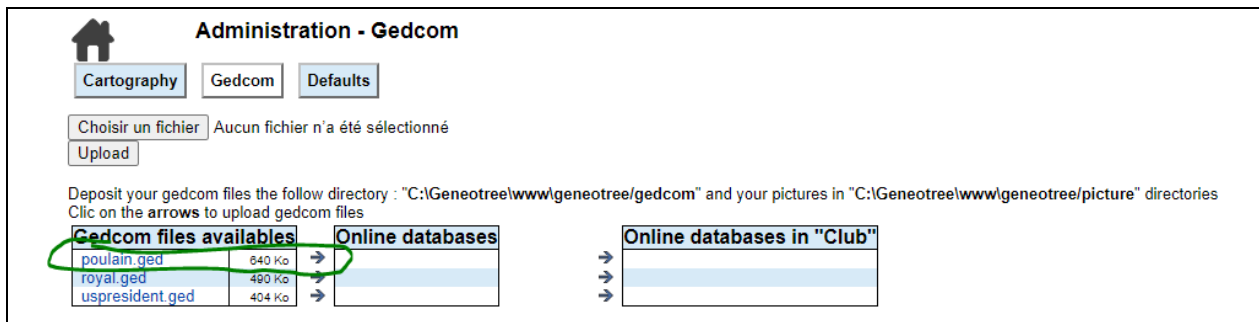

Online databases in "Club" →

The "Gedcom files disponibles" frame indicates that 2 gedcom files are ready to integrate into GeneoTree: royal.ged and uspresident.ged.

The "Online Databases" frame tells you that no gedcom is currently integrated into GeneoTree.

2. To upload your gedcom file, click on "Choose a file" button.

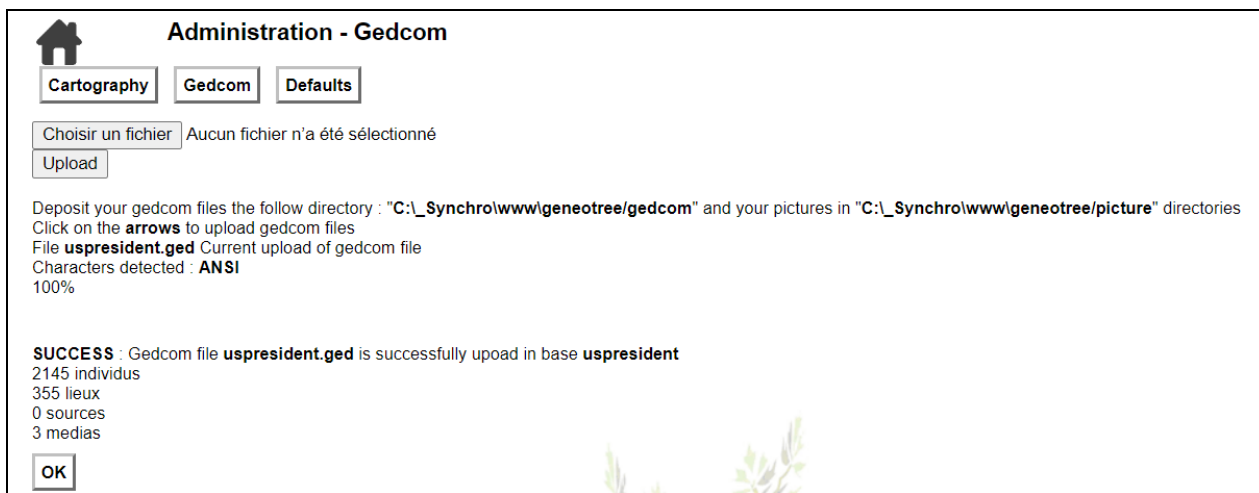

3. Select your gedcom file et click on "Upload" button. The follow screen appears:

Reminder: To display your personal gedcom files, transfer your gedcom file(s) to the /gedcom subdirectory of your server ("ged" extension required).

If the "Choose a file" button is not displayed, the Ftp function is not activated on your Php server. Try to activate it, or upload the gedcom file(s) yourself on the server's /geneotree/gedcom directory

4. Click to ➡ arrow button, a similar screen appears:

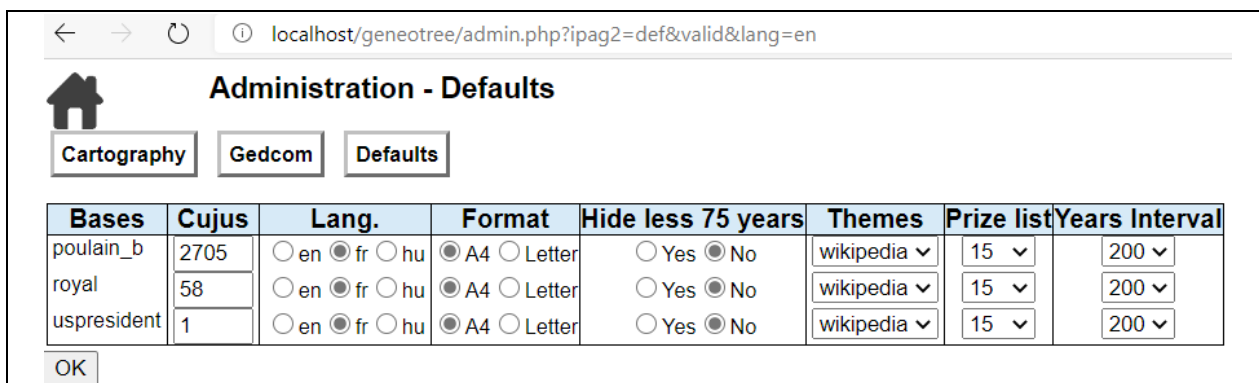

Warning: topographic points are integrated at this time. Do not forget to load the geographic bases before.

Note: If the Gedcom file is large, GeneoTree displays a percentage of completion.

1.3 Manage defaults

GeneoTree allows you to set default preferences (for example language), different for each base and each user.

These preferences are returned at the first access of the user. Then, the user can change their preferences. GeneoTree stores and returns them.

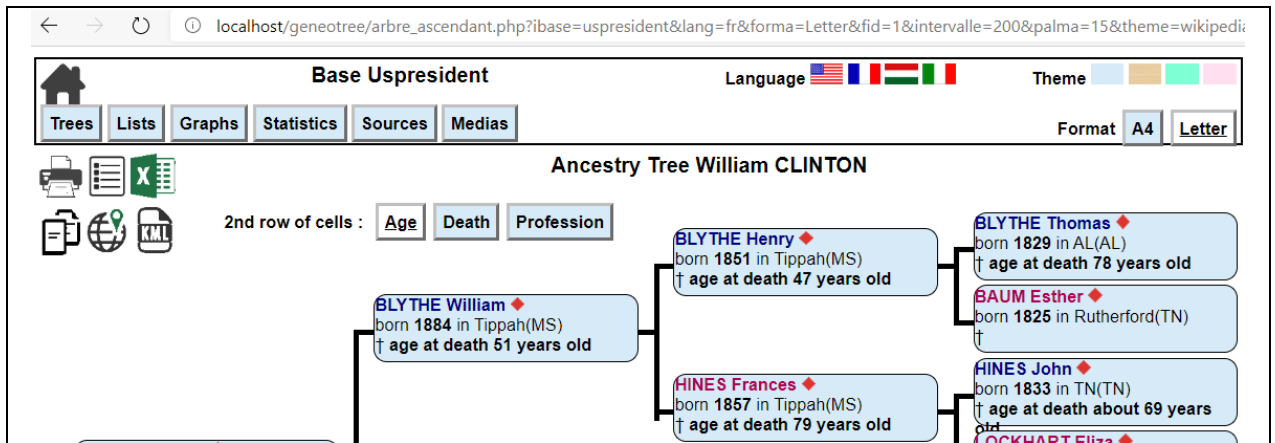

2 Discover GeneoTree

2.1 Discover your ancestors

1. Click on  home icon. A similar screen appears:

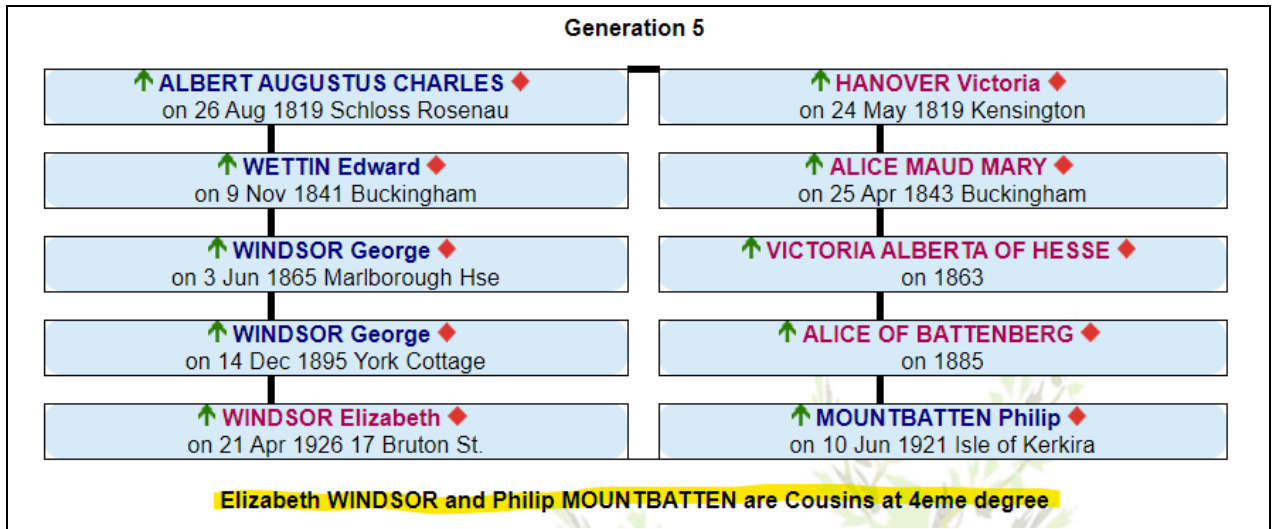

2. Click on your gedcom to visualize your genealogy data. A similar screen appears:

If message "Local host refused" appear, possibly Php or MySql runtimes are not executed. Verify services (menu Administration tools/ Service)

3. In the top bar, choose your language, theme and pdf format preference.
4. In the "individual" boxes, click on the "Ancestry tree", Mixed tree "and Descendancy tree" menus.
5. In the main menus, discover the trees, lists, graphs, statistics and media.
6. In the submenus, discover the pdf editions, Excel exports and interactive maps.
7. Do not miss specifics GeneoTree functionalities:
 - - display of **inbreeding trees** with the green arrow in the individual boxes
 - - display **cousins** in the individual file on the right.

2.2 Modify the central individual

At the first, GeneoTree offers the best de-cujus (central person) it could find. It's not necessarily you've been waiting for.

To modify it, display your future central individual in the right frame. Click on "Individual central" at the top right and validate.
